How to avoid delays over WHITE

Utilizing the Off Shore Route
## aka the AZEZU route

WHITE is used by EWR, LGA, and HPN as well as TEB for traffic heading down the east coast, resulting in heavy demand and inevitable delays during peak times.

For flights destined to the Florida terminals, "AZEZU" is an option

Back in the late 90's, 2 radar sites along the coast were upgraded.

ATC personnel noticed that we could see far out over the ocean beyond airspace that was always blocked by the military.

Routes were designed to make use of this.

Normal overwater route ~ 938 nm

KTEB ELVAE COL WHITE J209

West coast Florida traffic should file via LANNA (which usually has less volume than WHITE), but AZEZU is an available option

Why is it called the AZEZU route when AZEZU isn't even on the route?

- Good question

- AZEZU used to be on the route when it was created about 20 years ago. Subsequent airspace and route structure changes occurred, and AZEZU is now only on the route for arrivals to the PHL area.

- We did discuss a name change, but the decision was made to keep the name because that what everyone called it anyway

When is this option available?

- Two radar sites are used by ATC on these routes – Fort Fisher (QGV - NC) and Oceana (QVR – Virginia Beach).

- Both sites must be operational unless aircraft is ADS-B equipped.

- If ADS-B equipped, the route is only available southbound if one or both radar sites are out

- Check NOTAMs before filing

Will ATC assign these routes?

No, because ATC is not aware of the equipment on your aircraft (life rafts, etc).

Note – HF communication ability is not requred

If you are filed via WHITE and believe (or are advised by the tower) that AZEZU may be a better option, you can request a change to the AZEZU route to the tower. The tower will advise ZNY, and we will make the route amendment

CDM Operational Coded Departure Routes Database Query

- RMT WebService: 1.50
- Effective 03/29/2018 until 05/24/2018

Enter one or more of the available fields to search the CDM Operational Coded Departure Routes (CDR) database.   Fields left blank will return all values of that field. You can include AND ('&'), OR ('|'), and/or NOT ('!') in your request.

- **Route Code:** 8 character route code.
- **Origin:** 3 or 4 character departure airport designator.
- **Destination:** 3 or 4 character arrival airport designator.
- **Departure Fix:** Departure fix.
- **Route String:** All or any part of the route string.
- **Departure ARTCC:** 3 character center code.
- **Arrival ARTCC:** 3 character center code.
- **Traversed ARTCCs:** 3 character center codes.
- **Coordination Required:** coordination required when filing this route (Y/N).
- **Nav Eqp:** navigation equipment designator (1 - basic navigational routes, 2 - routes with RNAV DPs and/or STARs, 3 - routes with Q-route segments and/or pitch and catch points).
- **Associated Play:** All or any part of a Playbook Play name.
